DocuSign Services

This project provides a high-level API for performing DocuSign webservice operations.

Dependencies
This project relies on both the **DocusignWS3_0** and **DocusignCredential** libraries provides with the sample applications.

Packages

Java Package	Description
net.docusign.service	Defines service interfaces for DocuSign webservice operations.
net.docusign.service.impl	Provides a ready-to-use implementation of DocuSign services.

Service Implementations

Service class	Description
DocusignDeferredSigningServiceImpl	Provides envelope creation / sending for deferred signing via email.
DocusignEmbeddedSendingServiceImpl	Provides envelope sending through the DocuSign In-Session web interface.
DocusignEmbeddedSigningServiceImpl	Provides envelope signing through the DocuSign In-Session web interface.
DocusignEnvelopeServiceImpl	Provides operations to retrieve the status of envelope(s).
DocusignLoginServiceImpl	Provides account lookup based on username and password.
DocusignPingServiceImpl	Provides operations to ping the webservices to check whether they are active.
DocusignTemplateServiceImpl	Provides operations to create, update, and retrieve envelope templates for your account.
